

YOU EXPECT MORE,

WE DELIVER MORE.

At Canadian Air-Crane our commitment is to maximize the timber value of our customer's forestry resource.

Our S-64 Aircranes can do more than any other heli-logging machine and we utilize the aircraft's full potential.

Canadian Air-Crane can move your timber using feller buncher, standing stem or conventional heli-logging techniques - we know how to move more pounds per hour than any other heli-logger.

Customers that understand innovative forestry practices prefer standing stem harvesting because it raises the stand value and increases the harvestable land base.

From the coast to the interior, no matter what your terrain, call Canadian Air-Crane today and we'll help you determine how to get the maximum value from your timber.
